

PRELIMINARY DERMATOLOGY REPORT

Patient Ref: anonymous

Date: 2024-02-20

Generated By: HealthBuddy AI Scribe

Confidentiality: Private Medical Record

CHIEF COMPLAINT

Skin condition with white patches

HISTORY OF PRESENT ILLNESS

The patient initially presented with an image that showed a possible drug eruption or vitiligo, with the top predictions being Drug Eruption (47.7%) and Vitiligo (33.7%). A subsequent image was provided, showing a different area of the body, with the condition appearing more consistent with vitiligo, given the distinctive white patches.

AUTOMATED VISUAL ANALYSIS (LATEST SCAN)

Raw Model Output: Vitiligo: 84.9%, Actinic Keratosis: 5.8%, Drug Eruption: 5.4%, Sun/Sunlight Damage: 3.2%, Lichen: 0.4%

DIFFERENTIAL DIAGNOSIS

- Vitiligo
- Actinic Keratosis
- Drug Eruption

SUGGESTED MANAGEMENT PLAN

- Schedule a dermatological examination to confirm the diagnosis
- Discuss potential treatment options for vitiligo, such as topical corticosteroids or phototherapy
- Consider a thorough review of medications to rule out any drug-related causes
