

PRELIMINARY DERMATOLOGY REPORT

Patient Ref:	anonymous	Date:	2024-01-01
Generated By:	HealthBuddy AI Scribe	Confidentiality:	Private Medical Record

CHIEF COMPLAINT

Skin patches

HISTORY OF PRESENT ILLNESS

The patient uploaded 1 image for analysis, which was reviewed for potential skin conditions.

AUTOMATED VISUAL ANALYSIS (ALL SCANS)

Scan 1: Vitiligo 70.3%, Drug Eruption 4.1%, Squamous Cell Carcinoma 2.8%, Sun/Sunlight Damage 2.8%, Normal 2.0%

DIFFERENTIAL DIAGNOSIS

Based on the image analysis, the primary consideration is Vitiligo, given its high prediction percentage. However, other possibilities such as Drug Eruption and Squamous Cell Carcinoma, although less likely, should also be considered due to their presence in the top predictions.

SUGGESTED MANAGEMENT PLAN

A thorough clinical examination and possibly a biopsy are recommended to confirm the diagnosis and rule out other potential causes.

DISCLAIMER: This report is generated by AI. It is NOT a definitive diagnosis. All findings must be verified clinically.
