

PRELIMINARY DERMATOLOGY REPORT

Patient Ref:	anonymous	Date:	2024-01-01
Generated By:	HealthBuddy AI Scribe	Confidentiality:	Private Medical Record

CHIEF COMPLAINT

Red spots on the skin

HISTORY OF PRESENT ILLNESS

The patient presented with red spots on the skin and was concerned about the cause. A single image was reviewed, showing blister-like bumps with a rough texture, possibly related to sun exposure.

AUTOMATED VISUAL ANALYSIS (ALL SCANS)

Scan 1: Bullous 56.7%, Actinic Keratosis 11.7%, Sun/Sunlight Damage 3.1%, Drug Eruption 2.9%, Eczema 2.6%

DIFFERENTIAL DIAGNOSIS

Based on the image analysis, the top hypotheses include Bullous, Actinic Keratosis, and possible sun damage. Eczema and Drug Eruption are also considered, although with lower probabilities.

SUGGESTED MANAGEMENT PLAN

The patient is advised to keep the area moisturized and protected from the sun, using a gentle skin cream and sunscreen with a high SPF. A cool compress may help soothe itchy or uncomfortable bumps. A professional opinion from a dermatologist is recommended for a definitive diagnosis and personalized treatment plan.
